

ORCHARD AND ALLEY TREE PRESERVATION

We like to have fruit trees in the landscape.
It takes yearlong care.

Maintenance pruning

We ensure balance between the formation of leaves and flowers
We protect trees from breaking.

Harvest

The best promotion of old fruit varieties? Letting people taste them.

Prune to restore

We cure neglected trees.

Saplings

Pruning to shape, watering, fertilizing, protection ... it's a mission for generations to come.

Raising awareness

We share our experience with the public – during personal meetings, at seminars and online.

Planting

We establish new orchards – gene pool orchards to preserve old varieties, others to preserve beauty and good tasting fruit.

Experts

We are honoured to cooperate with the best specialists in the field.

Some orchards are grazed by sheep

Orchards are grassy

We do not use pesticides

We use compost as a fertilizer

We prefer legumes

We are looking for new co-workers
